Check the activation email and active account.

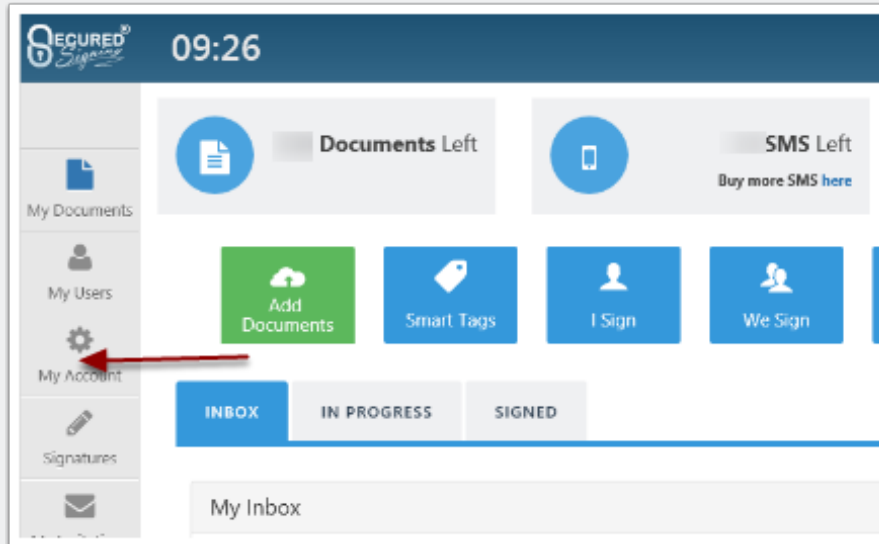

2. Get API key

Go to Secured Signing home page. <http://www.securedsigning.com/>

Click login button to login to account

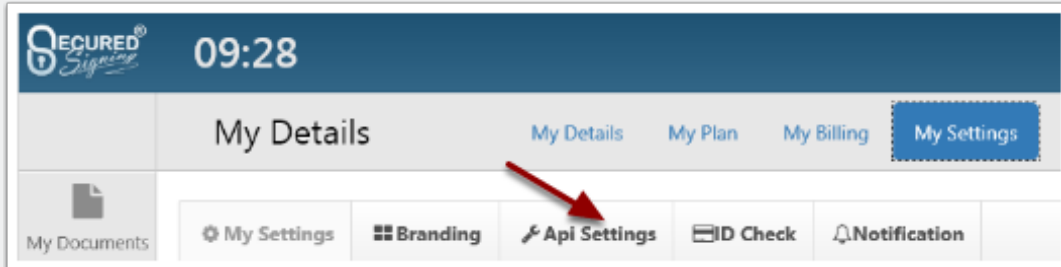

Go to My Account

Then My Settings

Then Api Settings

Click Add Api Key button to generate API key

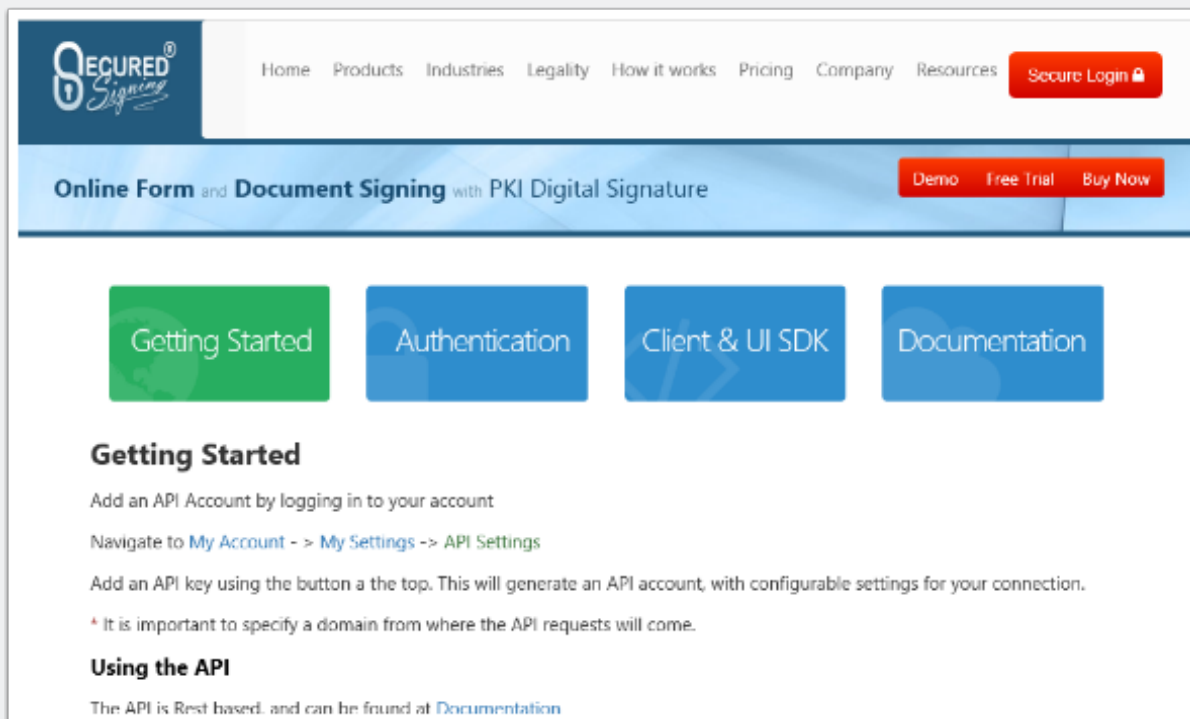

fill name and add your website/service url as well

Name	<input type="text"/>	
API Key	<input type="text" value="00000Q108K1LABY9OVL0T4"/>	
Secret	<input type="text" value="woAqt5+0YZHERw+Os+rNk"/>	
Access Urls	<input type="text" value="http://www.securedsigning.com"/>	<input type="button" value="✕ Delete Url"/>
Add Url	<input type="text"/>	<input type="button" value="+"/>
Remove Api Key	<input type="button" value="✕"/>	

3.Refer to documentation

Go to Secured Signing home page. <http://www.securedsigning.com/>

Go to Products/Developer or access directly
<https://www.securedsigning.com/developer/api-documentation>

The screenshot shows the top navigation bar of the Secured Signing website. The logo is on the left, followed by links for Home, Products, Industries, Legality, How it works, Pricing, Company, and Resources. A red 'Secure Login' button is on the right. Below the navigation bar is a blue banner with the text 'Online Form and Document Signing with PKI Digital Signature' and three buttons: 'Demo', 'Free Trial', and 'Buy Now'. Below the banner are four blue buttons: 'Getting Started' (highlighted in green), 'Authentication', 'Client & UI SDK', and 'Documentation'. The 'Getting Started' section contains the following text:

Getting Started
Add an API Account by logging in to your account
Navigate to [My Account](#) - > [My Settings](#) -> [API Settings](#)
Add an API key using the button at the top. This will generate an API account, with configurable settings for your connection.
* It is important to specify a domain from where the API requests will come.

Using the API
The API is Rest based, and can be found at [Documentation](#)

4. Get JavaScript UI SDK

Go to Developer page, <https://www.securedsigning.com/developer/api-documentation>

Under Client & UI SDK tab, go to UI SDK section.

Client & UI SDK

UI SDK

The UI SDK is provided as part of the JavaScript sdk. Please add the scripts as below

```
<script data-main="//api.securedsigning.com/web/v1.3/client/scripts/main" src="//api.s  
script>
```

Initialising SDK

To initialise the JavaScript SDK library

First create a config object as shown below

```
var config = {  
  "apiKey": <YOUR API KEY HERE>,  
  "baseUrl": "//api.securedsigning.com/web",  
  "version": "v1.3",  
  "secret": <YOUR API SECRET HERE>  
};
```

Uploading a document

You can use our uploader to add a document for signing

Use the following JavaScript function passing in a DOM element id for the upload button

This then on Success starts an ISign or WeSign process

```
securedsigning.CreateUpload(<DOM ELEMENT ID>, function(data) {  
  ISign(data.Reference);  
  //WeSign(data.Reference);  
},function (error) {  
  alert(error);  
});
```

After a document is submitted, a reference will return.

In HTML page, add the scripts as below to embed UI SDK

```
<script data-main="//api.securedsigning.com/web/v1.3/client/scripts/main"
src="//api.securedsigning.com/web/v1.3/client/scripts/require.js"></script>
```

Initialising UI SDK

First create a config object as shown below

```
var config = {
  "apiKey": <YOUR API KEY HERE>,
  "baseUrl": "//api.securedsigning.com/web",
  "version": "v1.3",
  "secret": <YOUR API SECRET HERE>
};
```

Next initialise the library.

We have provided a function `SSApiLoaded` that executes when the scripts have loaded if you are using our hosted JavaScript libraries

```
function SSApiLoaded() {
  securedsigning = new SecuredSigning(config);
};
```

5.Start WeSign

Uploading a document

You can use our uploader to add a document for signing

Use the following JavaScript function passing in a DOM element id for the upload button

This then on Success starts an WeSign process

```
securedsigning.CreateUpload(<DOM ELEMENT ID>, function(data) {  
    WeSign(data.Reference);  
    },function (error) {  
    alert(error);  
});
```

Embedding WeSign html resources

This embeds a signing resource in a DOM element with the id of 'content'

```
function WeSign(ref) {  
    var request = {  
        DocumentReference: ref  
    };  
    securedsigning.getWeSignResource(request, "content", function (error) {  
    });  
}
```

Invite other people to sign Docx, Doc, ODT, ODS, Xls, Xlsx, RTF & PDF documents

For many businesses signing contracts or obtaining customer signatures in order to close a deal often proves challenging. The traditional paper process is often time consuming and costly and may take a few days or several weeks to complete. With Secured Signing technology you will be able to close deals and sign contracts within minutes.

Simply create your document, add it to Secured Signing Service and invite your business associate, customers, suppliers, partners or others to sign.

We Sign key features and benefits:

- Invite others to sign
- Invite a witness
- Broadcasting – Mass invitee list
- Create signature workflow
- View and monitor signing process status
- Email notifications and reminders
- Trusted Personalised X509 PKI Digital Signature
- Legally binding
- Verify validity of signatures
- Sign remotely from anywhere, anytime
- Efficient **paper-free environment**
